Sprint 2 Think Aloud Joshua Clark

Goals:
- Get another opinion on if the written code makes sense when looked at by someone for the first time.
- Get general feedback on the written code.

I started by introducing what I was trying to do before I went into explaining the code I had written. I wanted the reviewer to have an understanding of what they were looking at.

They will be pulling up the review page. The code did all the work in requesting the needed data from Github.

I believe I explained the code very well to my reviewer. From the feedback I received, I was informed that my code looked very appealing and was easy to understand. I did not face any surprises, the reviewer did not have many suggestions to give me. Overall, it went very well.
